Melton Electric
111 Jacob Lane
Myrtle Beach, SC 29579

Reference: Sweeney WTP GAC Contactors Addition
Cape Fear Public Utility Authority
Subject: Letter of Recommendation

To Whom it May Concern,

Melton Electric served as the electrical subcontractor on the above referenced project.

The Sweeney Granular Activated Carbon Facility was a tough project, that required heavy coordination and planning, and timely execution of the work. Melton Electric met all expectations and helped provide a high-quality project that was on time and within budget. This project was met with unprecedented challenges while being constructed thru a global pandemic, and Melton Electric worked through those challenges to help the project continue without delay.

Melton Electric served a pivotal role in the project and was a major contributor to its success. Melton's management, workmanship and execution were all top-notch.

We appreciate the assistance of Melton Electric in working with Adams Robinson to construct this successful project and we look forward to the opportunity to work together on future projects.

Adams Robinson would recommend Melton Electric on future projects.

Sincerely,

Dustin Downs
Logistics Manager
