

May 6, 2025

Good afternoon, Larry,

I wanted to reach out and send a personal thank you for Melton Electric's services and assistance traversing the design and day-to-day operations to make the Cancer Center project successful. I feel Melton Electric took the project by the horns, remained accountable, and worked through every issue we had with the bigger picture always in mind.

Leland went above and beyond to make sure this project was planned, quantified, and even gave a push on site when needed. It is rare for us to see trade partner project managers assist to the level of detail Leland did and ensure it translates to the field. The project would have been very hard to manage without his assistance, especially on the med systems. Ty got the project out of the ground and was also great to work with. I hope you are pairing young guns with him so they can see what an electrical superintendent is supposed to do. Toby also killed it; Toby is an asset to Melton Electric and is someone we would love to have as a electrical superintendent on our jobs in the future, even if he is an Eagles fan... Toby understands the electrical trade, but even better, he understands the other trades and works well with others. Toby maintained a great attitude even through the hardest part of the project (the end) and always got things done as promised. You have some bright staff who should be considered a model to what healthcare style construction demands. I appreciate the experience and we look forward to the next one.

Leland and Toby, Thank you for all the help in making this project successful!!

Regards,  
Julian
